1. Bağımlı olasılıklı farklı dizilimsiz simetrik bitişik olasılık 2. Simetrinin bir durumunun bulunabileceği olaylara göre bağımlı olasılıklı farklı dizilimsiz simetrik bitişik olasılık 3. Simetrinin iki durumunun bulunabileceği olaylara göre bağımlı olasılıklı farklı dizilimsiz simetrik bitişik olasılık 4. Simetrinin üç durumunun bulunabileceği olaylara göre bağımlı olasılıklı farklı dizilimsiz simetrik bitişik olasılık 5. Simetrinin dört durumunun bulunabileceği olaylara göre bağımlı olasılıklı farklı dizilimsiz simetrik bitişik olasılık

Dili: Türkçe + Matematik Mantık

Yazar Hakkında

İsmail YILMAZ; Hamzabey Köyü, Yeniçağa, Bolu'da 1973 yılında doğdu. İlkokulu köyünde tamamladıktan sonra, ortaokulu Yeniçağa ortaokulunda tamamladı. Liseyi Ankara Ömer Seyfettin ve Gazi Çiftliği Liselerinde okudu. Lisans eğitimini Çukurova Üniversitesi Fen Edebiyat Fakültesi Fizik bölümünde ve doktora eğitimini Gazi Üniversitesi Eğitim Bilimleri Enstitüsü Fen Bilgisi Eğitimi Anabilim Dalında tamamladı. Fen Bilgisi Eğitiminde; Newton'un hareket yasaları, elektrik ve manyetizmanın prosedürel ve deklaratif bilgi yapılarıyla birlikte matematik mantık yapıları üzerine çalışmalar yapmıştır. Yazarın ilk alanlarda yapmış olduğu çalışmalar arasında ölçme ve değerlendirmeye yönelik çalışmaları da mevcuttur.

Yazar ve VDOİHİ

Yazar doktora tez çalışmasına kadar, dijital makinalarla sayısallaştırılabilen fakat insan tarafından sayısallaştırılamayan verileri, **a**nlamlı **k**üçük **p**arça (akp)'lara ayırıp skorlandırarak, sayısallaştırma problemini çözmüştür. Anlamlı en küçük parçaların Türkçe kısaltmasını olasılığın birimlendirilebilir olmasından dolayı, olasılığın birimini akp olarak belirlemiştir. Matematiğinin başlangıcı olasılık olup tüm tanımlı değişkenlerde olabileceği gibi aynı zamanda enformasyonunda temeli olasılık olduğundan enformasyon içeriğinin de doğal birimi akp'dir.

Verilerin objektif lojik sempliste sayısallaştırılmasıyla **V**eri **D**eğişkenleri **O**lasılık ve **İ**htimal **H**esaplama **İ**statistiği (VDOİHİ) geliştirilmeye başlanmıştır. Doktora tezinin nitel verilerini, bir ilk olarak, -1, 0, 1 skorlarıyla sayısallaştırarak iki tabanlı olasılığı sınıflandırıp; pozitif, negatif (ve negatiflerdeki pozitif skorlar için ayrıca eşitlik tanımlaması yapılıp), ilişkisiz ve sıfır skor aşamalarıyla değerlendirme yöntemi geliştirmiştir. Bu yöntemin tüm kavramlarının; tanım ve formüllerinin sınırları belirlenip, kendi içinde tam bir matematiği geliştirilip, uygulamalarla veri elde edilmiş, verilerin hem değerlendirmeleri hem de bulguların sözel ifadelerini veren yazılım paket programı yapılarak, bir disiplinin tüm yönleri yazar tarafından gerçekleştirilerek doktorasını bilim tarihinde yine bir ilk ile tamamlamıştır. Nitel verilerden elde edilebilecek bulguların sözel ifadelerini veren yazılım paket programı gerçek olması gereken yapay zekanın ilk örneğidir.

Yazar, ölçme araçları için madde tekniği tanımlayıp, değerlendirme yöntemlerini belirginleştirilerek, eğitimde ölçme ve değerlendirme için beş yeni boyut aktiflemiştir. Ölçme ve değerlendirmeye, aktif ve pasif değerlendirme tanımlaması yapılarak, matematiği geliştirilmiş ve geliştirilmeye devam edilmektedir. Yazar yaptığı çalışmalarda **P**roblem **Ç**özüm **T**eknikleri (PÇT) aktifleyerek; verilenler-istenilenler (Vİ), serbest cisim diyagramı/çizim (SCD), tanım, formül ve işlem aşamalarıyla, eğitimde ölçme ve değerlendirmede beş boyut daha aktiflemiştir. PÇT aşamalarını bilgi düzeyi, çözümlerin sonucunu da başarı düzeyi olarak tanımlayıp, ölçme ve değerlendirme için iki yeni boyut daha kazandırmıştır. Sınıflandırılmış iki tabanlı olasılık yönteminin aşamaları ve negatiflerdeki pozitiflerle, ölçme ve değerlendirmeye beş yeni boyut daha kazandırılmıştır. Verilerin; Shannon eşitliği veya VDOİHİ'de verilen olasılık-ihtimal eşitlikleriyle değerlendirmeyi bilgi

GÜLDÜNYA

d

merkezli, matematiksel fonksiyonlarla (lineer, kuvvet, trigonometri “sin, cos, tan, cot, sinh, cosh, tanh, coth”, ln, log, eksponansiyel v.d.) değerlendirmeyi ise birey merkezli değerlendirme, sınırlandırması getirerek, değerlendirmeye iki yeni boyut daha kazandırmıştır. Ayrıca $\frac{a}{b}+\frac{c}{d}$ ve $\frac{a+c}{b+d}$ matematiksel işlemlerinin anlam ve sonuç farklılıklarını, değerlendirme için aktifleyerek, değerlendirmeye iki yeni boyut daha kazandırmıştır. Böylece eğitimde ölçme ve değerlendirmeye; PÇT aşamaları 5×5, yine PÇT'nin bilgi ve başarı düzeylerinin 2×2, sınıflandırılmış iki tabanlı olasılık yöntemi 5×5, bilgi ve [illegible] merkezli ölçme ve değerlendirmeyle 2×2, matematiksel işlem farklılıklarıyla 2×2 [illegible]mak üzere 40.000 yeni boyut kazandırmıştır. Bu boyutlara yukarıda verilen matematiksel fonksiyonlarında dahil edilmesiyle en az (13×13) 6.760.000 yeni boyut[illegible] primitif bir[illegible]de, ölçme ve değerlendirmeye, katılabilmesinin yolu yazar tarafından açılmış olmasına rağmen, günümüze kadar yukarıda bahsedilen boyutların ilgi düzeyinde eğitimde ölçme ve değerlendirmede, tek boyuttan öteye (lineer değerlendirme) geçirilememiştir. Bu noktadan sonra, ölçme ve değerlendirmeye fark istatistiğiyle boyut kazandırılabilmiştir. Fark istatistiğiyle kazandırılan boyutlarında hem ihtimaller çıkarılacak yeni boyutlar hem de ihtimallerin fark istatistiğinden türetilebilecek boyutların yanında gizli kalacağı kesin! Ölçme ve değerlendirmeye yeni boyutlar kazandırılmasının en önemli amaçları; beynin öğrenme yapısının kesin bir şekilde belirlenebilmesi ve öğretim süreçlerinin bilimsel bir şekilde yapılandırılabilmesidir. Beyine ilgili VDOİHİ Bağımlı Olasılık Cilt 1'in giriş bölümünde verilenlerin genişletilmesine bu şekilde devam edilecektir. Fakat öğretim süreçlerinin; teorik öngörülerle ve/veya insanın yaradılışına uyma olasılığı son derece düşük doğrusal değerlendirmelerle yapılandırılması, yazar tarafından insanlığa ihanet olarak görüldüğünden, doğru verilerle eğitimin bilimsel niteliklerde yapılandırılabilmesi için, ölçme ve değerlendirmeye yeni boyutlar kazandırılmalıdır.

Günümüze kadar yaşayan dillerin 10 kavramı bile kazandırabilen hemen hemen yokken, yayınlanan VDOİHİ ciltlerinde (cilt 2, 2.2.1, 2.3.1 ve 2.3.2) yaklaşık 1000 kavram Türkçeye kazandırılarak ciltlerin dizinlerinde verilmiştir. Bu kavramların tüm sınırları belirlenip, açıklık ve anlaşılır tanımlarıyla birlikte, eşitlikleri de verilmiştir. Bu düzeyde yani bilimsel düzeyde bilime kavramlar Türkçe olarak kazandırılmıştır. Yayınlanacak VDOİHİ'lerde bilime Türkçe kazandırılacak kavramların on binler düzeyinde olacağı öngörülmektedir.

VDOİHİ'de verilen eşitlikler aynı zamanda dillerinde eşitlikleridir. Diğer bir ifadeyle dillerin matematik yapıları VDOİHİ ile ortaya çıkarılmıştır. Türkçe ve İngilizcenin olasılık yapıları VDOİHİ ile belirlenerek, formüllerin dillere (ağırlıklı Türkçe) uygulamalarıyla hem dillerin objektif yapıları belirginleştiriliyor hem de makina-insan arası iletişimde, makinaların iletişim kabiliyetinde en üst dil olarak Türkçe geliştiriliyor. İleriki ciltlerde Türkçenin matematik mantık yapısı da verilerek, Türkçe'nin makinaların iletişim dili yapılması öngörülmektedir.

Bilim(de) kesin olanla ilgileni(li)r, yani bilim eşitlik ve/veya yasa üretir veya eşitliklerle konuşur. Bunun mümkün olmadığı durumlarda geçici çözümler üretilebilir. Bu geçici çözümler veya yöntemleri, her hangi bir nedenle bilimsel olamaz. Bilimin yasa veya eşitlik üretimindeki kırılma, Cebirle başlamıştır. Bilimdeki bu kırılma mühendisliğin, teknolojiye

GÜLDÜNYA

dönüşümünün başlangıcıdır. Bilimdeki kırılma ve mühendisliğin teknolojiye dönüşümü, insanlığın gelişimini hızlandırmakla birlikte, bu alanda çalışanların; ego, öngörüsüzlük, ufuksuzluk ve beceriksizlikleri gibi nedenlerden dolayı, insanlığın gelişimi ivmelendirilemediği gibi bu basiretsizliklerle insanlığa pranga vurmayı bile kısmen başarabilmişlerdir. VDOİHİ ve telifli eserlerinde verilen; değişken belirleme, eşitlik-yasa belirleme ve bunların sözel yorumlarını yapabilen yazılımlarla, ve yapılabilecek benzeri yazılımlarla, insanlığın gelişimi ivmelendirilebileceği gibi isteyen her birey, gerçeklerin (VDOİHİ Bağımlı Olasılık Cilt 1'in giriş bölümünde tanımlanmıştır) bilgi ve [illegible]isine daha kolay ulaşabilme imkanı sağlanmıştır.

Şuana kadar zaruri tüm tanımların, zaruri tüm eşitliklerin ve bunların epistemolojik [illegible] (0. epistemolojik seviye) en azından 1. epistemolojik seviye bilgil[illegible]in birlikte verildiğine ilk yada ilk örneklerinden biri VDOİHİ'dir. Bu kapsamda VDOİHİ'de [illegible] kadar yaklaşık 1000 kavramın, bilime kazandırıldığı yukarıda belirtilmişti. Bu kapsamda yine VDOİHİ'de 5000'in üzerinde orijinal; ilk ve yeni eşitlik geliştirilmiştir. Bu eşitlikler kasıtlı olarak ilk defa dört farklı yapıda birlikte verilmektedir. Bu eşitlikler a) sabit değişkenli (örneğin; bağımlı olasılıklı farklı dizilimli simetrik olasılık eşitlikleri) b) sabit değişkenli işlem uzunluklu (örneğin; simetrinin son durumunun bulunabildiği olaylara göre bağımlı olasılıklı farklı dizilimli simetrik olasılık eşitliği) c) hem değişken uzunluklu hem işlem uzunluklu (örneğin; simetrinin her durumunun bulunabildiği olaylara göre bağımlı olasılıklı farklı dizilimli simetrik olasılık eşitliği) d) sabit değişkenli zıt işlem uzunluklu (bu eşitlik VDOİHİ cilt 2.1.3'ten itibaren verilecektir. Örneğin; $\sum_{i=}^{} $) yapılarda verilmektedir. Sabit değişkenli eşitliklerle, bilim ve teknolojideki gelişimin[illegible]in çoğunluğu karşılanabilirken, geleceğin bilim ve teknolojisinde ihtiyaç duyulabilecek eşitlik yapıları kasıtlı olarak aktiflenmiş veya geliştirilmiştir.

İnsanın hem öğrenmesinin desteklenmesi hem de bilginin teknolojiyle ilişkisini kurabilmesi için özellikle VDOİHİ Soru Problem ve Çözümleri ciltlerinde, soru ve problem birbirinden ayrılarak yeniden tanımlanıp sınırları belirlenmiştir. Böylece örnek, soru, problem ve ispat arasındaki farklılıklar belirginleştirilmiştir. Ayrıca yine insanın hem öğrenmesinin desteklenmesi hem de bilginin teknolojiyle ilişkisini daha kesin kurabilmesi için Sertaç ÖZER'in İlmi Sohbetler eserinin M5-M6 sayfalarında verilen epistemolojik seviye tanımları; örnek, soru, problem ve ispatlara uyarlanmıştır. Böylece; örnek, soru, problem ve ispatların epistemolojik seviyeyle, hem bilgiyle-öğrenme arasında hem de bilgi-teknoloji arasında yeni bir köprü kurulmuştur.

Geride bıraktığımız yüzyılda, özellikle Turing ve Shannon'un katkılarıyla iki tabanlı olasılığa dayalı dijital teknoloji kurulabilmiştir. Kombinasyon eşitliğiyle iki tabanlı simetrik olasılıklar hesaplanabildiğinden, ihtimalleri de kesin olarak hesaplanabilir. İkiden büyük tabanların; bağımsız olasılık, bağımlı olasılık, bağımlı-bağımsız olasılık, bağımlı-bağımlı olasılık veya bağımsız-bağımsız olasılık dağılımlarındaki simetrik olasılıkları VDOİHİ'ye kadar kesin olarak hesaplanamadığından (hatta VDOİHİ'ye kadar olasılığın sınıflandırılması bile yapılmamış/yapılamamıştır), farklı tabanlarda çalışabilecek elektronik teknolojisi kurulamamıştır. VDOİHİ'de verilen eşitliklerle, hem farklı olasılık dağılımlarında hem de her tabanda simetrik olasılıkların olabilecek her türü, hesaplanabilir kılındığından, ihtimalleri de

GÜDÜNYA

f

kesin olarak hesaplanabilir. Böylece VDOİHİ'de verilen eşitliklerle hem istenilen tabanda hem de istenilen dağılım türlerinde çalışabilecek elektronik teknolojisinin temel matematiği kurulmuştur. Bundan sonraki aşama bilginin-ürüne dönüşme aşamasıdır. Ayrıca VDOİHİ'de özellikle uyum eşitlikleri kullanılarak farklı dağılım türlerine geçişin yapılabileceği eşitliklerde verilerek, dijital teknoloji yerine kurulacak her tabanda ve/veya her dağılım türünde çalışan teknolojinin istenildiğinde de hem farklı taban hem de farklı dağılım türlerine geçişinin yapılabileceği matematik eşitlikleri de verilmiştir. Böylece tek bir tabana dayalı dijital teknoloji yerine, sonsuz çalışma prensibine dayalı elektronik teknolojinin kavramsel-matematiksel yapısı VDOİHİ ile kurulmuş ve kurulmaya devam etmektedir.

VDOİHİ'de verilen eşitlikler aynı zamanda en küçük biyolojik birimden itibaren tüm canlı temel biyolojik birimin "genetiğin" temel matematiğidir. En küçük biyolojik birim olarak DNA alındığında, VDOİHİ'de verilen eşitlikler DNA, RNA, Protein, ... teknolojilerinin temel eşitlikleridir. Bu eşitlikler VDOİHİ'de teorik düzeyde DNA, RNA, Protein, Gen ve hastalıklarla ilişkilendirilmektedir. Bu eşitlikler gelecekte atom düzeyinden başlanarak en kompleks biyolojik birimlere kadar tüm biyolojik birimlerin laboratuvar ortamlarında üretiminin planlı ve kontrollü yapılabilmesinde ihtiyaç duyulacak temel eşitliklerdir. Böylece bir canlının, örneğin insanın, atom düzeyinden başlanarak laboratuvar ortamında üretilebilir/yapılabilir kılınmasının, matematiksel yapısı ilk defa VDOİHİ'de verilmektedir. Elbette bir insanın laboratuvar ortamında üretilebilir olmasıyla, bunun gerçekleştirilmesi aynı değildir. Gerçekleştirilebilmesi için dini, etik, ahlaki v.b. aşamalarda da doğru kararların verilmesi gerekir. Fakat organların v.b. biyolojik birimlerin laboratuvar ortamında üretilmesinin önünde benzer aşamaların engel oluşturduğu söylenemez. İhtiyaç halinde bir insanın; organının, sisteminin veya uzvunun v.b. her yönüyle aynısının laboratuvar ortamında üretilmesi veya soyu tükenmiş bir canlının yeniden üretimi veya soyunun son örneği bir canlı türünün devamı VDOİHİ'de verilen eşitlikler kullanılarak sağlanabilir. Biyolojik bir yapının laboratuvar ortamında üretimiyle, örneğin herhangi bir makinanın üretilmesinin İslam açısından aynı değerde olduğunu düşünüyorum. Bu yaradan'ın bize ulaşabilmemiz için verdiği bir izdir. Eğer araştırılması istenmeseydi, bizim öyle bir imkanımızda olamazdı. Fakat bilginin, bizim ulaşabileceğimiz bilgi olması, yani gerçeğin bilgisi olması, her zaman ve her durumda uygulanabilir olacağı anlamına gelmez. Umarım yapmak ile yaratmak birbirine karıştırılmaz!

VDOİHİ'de hem sonsuz çalışma prensibine dayalı elektronik teknolojisinin matematiksel yapısı hem de Telifli eserlerinde ve VDOİHİ'de, ilk defa yapay zeka çağının kapılarını aralayan çalışmalar yapılmıştır. VDOİHİ cilt 2.1.1'in giriş bölümünde yapay zeka ve çağının tanımı yapılarak, kütüphane ve referans bilgileriyle ilişkilendirilmiştir. Daha sonra VDOİHİ ve Telifli eserlerinde insanlığın gelişimini ivmelendirecek; yapay zeka görev kodları, verilerin analizlerine ait olduğu disiplinlin belirlenmesi, verinin analizinden verilen ve istenilenlerin belirlenmesi, değişken analizi, eksik değişkenlerin belirlenmesi, eksik değişkenlerin verilerinin üretimi, değişkenler arası eşitliklerin kurulması ve elde edilen bilgilerin sözel ifadeleriyle bilim ve teknoloji için gerekli bilgiyi üretebilen yazılımlar verilmiştir. Hem bu yazılımlarla hem de benzeri yazılımlarla, bilim insanları tarafından üretilemeyen bilgi ve teknolojilerin isteyen her kişi tarafından üretilebilir olması sağlanmıştır. Ayrıca kütüphane ve referans bilgilerinin üretiminde, olasılık dağılımları üzerinden çalışan makinaların bir olayın

GÜLDÜNYA

tüm yönlerini (olasılıklarını) kullanmaları sağlanarak, tıpkı insan gibi düşünebilmesi sağlanmıştır. Böylece makinaların özgürce düşünebilmesinin önündeki engeller kaldırılmıştır. Gerçek yapay zeka pahalı deneylere ihtiyacı ortadan kaldırarak, insanlara yaradan'ın tanıdığı eşitliklerin (matematiksel eşitlik değil!), belirli insanlar tarafından saptırılarak, diğerlerinin eşitlik ve özgürlerinin gasp edilmesinin önünde güçlü bir engel teşkil edecektir. Bugüne kadar artifical inteligence çalışmalarıyla sadece ve sadece kütüphane bilgisinin bir kısmı üretilebildiği ve kütüphane bilgisi üretebilen teknoloji geliştirildiğinden, bunlar yapay zekanın öncü çalışmalarından öte geçip yapay zeka konumunda düşünülemez. Gerçek yapay zeka hem kütüphane hem de referans bilgisi üretebilir olması gerektiğinden; a) yazar tarafından doktora tez çalışması başta olmak üzere belirli çalışmalarında kütüphane bilgisinin ileri örneklerinin başarıldığından, b) ilk defa VDOİHİ ve Telifli eserlerinde referans bilgisini üreten yazılımlar başarıldığından ve c) yapay zekanın gereksinim duyabileceği dijital teknoloji yerine, enerjisiz çalışma prensibine dayalı elektronik teknolojisinin bilimsel-matematiksel yapısı yazar tarafından geliştirildiğinden, insanlığın bugüne kadar uyguladığı teamüller gereği adlandırmanın da Türkçe yapılması elzem ve adil bir zorunluluktur. Bu nedenle insan biyolojisinin ürünü olmayan zeka "yapay zeka" yerine insan biyolojisinin ürünü olamayan zekayla insanlığın gelişiminin ivmelendirildiği zaman periyodu da "yapay zeka çağı" olarak adlandırılmalıdır.

Yazar tarafından VDOİHİ'de, Cebirde günümüze; a) bilimsel gelişim, olması gereken veya olabilecek gelişime göre düşük olduğundan, b) teorik çalışmaların omurgasının matematiğe terk edilmesi ve matematikçilerinde üzerlerine düşeni yerine getirememelerinden dolayı, c) yapay zeka karşısında buhrana düşülmesinin önüne geçilebilmesi ve d) kainatın en kompleks birimi olan insan beynine dokunulmadan bilimsel gelişimin başarılabilmesi için, yasa/eşitliklerin, uyum ve genel yapıları, olasılık üzerinden belirlenmiştir.

Yazar tarafından VDOİHİ Bağımlı ve Bir Bağımsız Olasılıklı Büyük Farklı Dizilimli Simetrik Olasılık Cilt 2.2.1 de insanlığın bilimsel ve teknolojik gelişimini ivmelendirebilecek uyum çağının tanımlanmasıyla yapılarak, VDOİHİ'de ilk defa yasa/eşitliklerin, olasılık eşitlikleri üzerinden uyum yapıları verilmiştir.

Yazar tarafından VDOİHİ Bağımlı ve Bir Bağımsız Olasılıklı Farklı Dizilimsiz Simetrik Olasılık Cilt 2.3.1'de insanlığın bilimsel ve teknolojik gelişimini ivmelendirebilecek genel çağın tanımlanmasıyla yapılarak, VDOİHİ'de yasa/eşitliklerin, olasılık eşitlikleri üzerinden genel yapıları verilmiştir.

Yazar tarafından VDOİHİ Bağımlı ve Bir Bağımsız Olasılıklı Farklı Dizilimsiz Simetrik Bulunmama Olasılığı Cilt 2.3.2 insanlığın bilimsel ve teknolojik gelişimini ivmelendirebilecek dördüncü bir çağ olarak, gerçek zaman ufku ötesi çağı tanımlanmıştır. Bu çağın tanımlanmasında; Sertaç ÖZENLİ'nin İlmi Sohbetler eserinin R39-R40 sayfalarından yararlanılarak, kapak sayfasındaki ve T21-T22'inci sayfalarında verilen şuurluluğun ork or modelinin özetinin gösterildiği grafikten yararlanılmıştır. Doğada rastlanmayan fakat kuantum sayılarıyla ulaşılabilen atomlara ait bilgilerimiz, gerçek zaman ufku ötesi bilgilerimizin, gerçekleştirilmiş olanlarıdır. Gerçekleştirilebilecek olanlarından biri ise kainatın herhangi bir

GÜLDÜNYA

yerinde yaşamını sürdüren herhangi bir canlıdan henüz haberdar bile olmadan, var olan genetik bilgi ve matematiğimizle ulaşılabilir olan tüm bilgilerine ulaşılmasıdır.

Özellikle; sonsuz çalışma prensibine dayalı elektronik teknolojisi, yapay zeka, gerçek zaman ufku ötesi bilgilerimizin temel eşitliklerinin verilebilmesi, başlangıçta kurucusu tarafından yapılabileceklerin ilerleyen zamanlarda o disiplinin cazibe merkezine dönüşerek insan kaynaklarının israfının önlenebilmesi nedenleriyle ve en önemlisi Yaradan'ın bizlere verdiği adaletin insan tarafından saptırılamaması için; VDOİHİ, bugüne kadar [illegible] eserlerle kıyaslanamayacak ölçüde daha kapsamlı verilmeye çalışılmaktadır.

Yazar VDOİHİ'nin ciltlerini, Türkçe ve insanlığın tek evrensen dili olan matematik [illegible] dillerinde yazmaktadır. Yazar eserlerinden insanlığın aynı niteliklerle yararlanabilmesi için her kişiye eşit mesafede ve anlaşılırlıkta olan günümüze kadar [illegible] insanlığın geliştirebildiği yegane evrensel dilde VDOİHİ ciltlerini yazmaya devam edecektir.

VDOİHİ ve telifli eserleri ile bitirilen veya sonu başlatılanlar;

- ✓ VDOİHİ'de dillerin matematiği kurularak, o dil için [illegible] mihenk taşı gören zavallılar sınıfı
- ✓ Baskın dillerin, dünya dili olabilmesi
- ✓ VDOİHİ ve Telifli eserlerine verilen eşitlik ve yasa belirleme yazılımlarıyla, gerçeklerden uzak ve ufuksuz sözde akademisyenlere insanlığın tahammülü
- ✓ Bilim ve teknolojide sermayeye olan bağımlılık
- ✓ Sermaye birikiminin [illegible]
- ✓ Primitif ölçme ve değerlendirme

Sanırım bilgi ve teknolojideki kaderimiz verene ilişkilendirilmiş.

BAĞIMLI OLASILIKLI DAĞILIMLARDA SİMETRİNİN DURUMLARININ BULUNABİLECEĞİ OLAYLARA GÖRE SİMETRİK OLASILIK

Bağımlı Olasılıklı Farklı Dizilimli ve Farklı Dizilimsiz Bağımlı Durum Sayısı Bağımlı Olay Sayısından Büyük Dağılımlarda Simetrinin Durumlarının Bulunabileceği Olaylara Göre

- **Farklı Dizilimli**
  - **Simetrik Olasılık**
  - **Simetrik Bitişik Olasılık**
  - **Simetrik Ayrım Olasılığı**
  - **Simetrik Bitişik-Ayrım Olasılığı**
  - **Düzgün Simetrik Olasılık**
  - **Düzgün Olmayan Simetrik Olasılık**
- **Farklı Dizilimsiz**
  - **Simetrik Olasılık**
  - **Simetrik Bitişik Olasılık**
  - **Simetrik Ayrım Olasılığı**
  - **Simetrik Bitişik-Ayrım Olasılığı**
  - **Düzgün Simetrik Olasılık**
  - **Düzgün Olmayan Simetrik Olasılık**

Bağımlı dağılımlar, farklı dizilimli ve farklı dizilimsiz dağılımlardan oluşur. Bağımlı durum sayısı bağımlı olay sayısına eşit farklı dizilimsiz bir dağılım olur. Bağımlı durum sayısı bağımlı olay sayısına eşit farklı dizilimli dağılımlar da simetrinin durumlarının bulunabileceği olaylara göre simetrik olasılıklar bir önceki bölümde işlendiğinden, bu bölümde bağımlı durum sayısı bağımlı olay sayısından büyük hem farklı dizilimli hem de farklı dizilimsiz dağılımlardaki simetrik olasılıklar incelenecektir.

Bağımlı durum sayısı bağımlı olay sayısından büyük farklı dizilimli dağılımlarda simetrinin durumlarının bulunabileceği olaylara göre; simetrik olasılık, simetrik bitişik olasılık, simetrik ayrım olasılığı, simetrik bitişik-ayrım olasılığı, düzgün simetrik olasılık ve düzgün olmayan simetrik olasılıklar, bağımlı durum sayısı bağımlı olay sayısına eşit farklı dizilimli dağılımlarda simetrinin durumlarının bulunabileceği olaylara göre çıkarılan eşitliklerde $(D-s)!$ terimi yerine $\frac{(D-s)!}{(D-\boldsymbol{n})}$ terimi yazılmasıyla elde edilecektir.

Bağımlı durum sayısı bağımlı olay sayısından büyük farklı dizilimsiz dağılımlarda simetrinin durumlarının bulunabileceği olaylara göre; simetrik olasılık, simetrik bitişik olasılık, simetrik ayrım olasılığı, simetrik bitişik-ayrım olasılığı, düzgün simetrik olasılık ve düzgün olmayan simetrik olasılığının tanım ve eşitlikleri de bu bölümde verilecektir. Bu eşitlikler ise; simetriden seçilecek bir duruma, simetrinin ilk ve son durumuna, simetrinin ilk ve herhangi bir durumuna, simetrinin herhangi iki durumuna, simetrinin ilk ve herhangi iki

GÜLER UYA

durumuna, simetrinin ilk herhangi bir ve son durumuna ve simetrinin ilk herhangi iki ve son durumuna göre verilecektir. Farklı dizilimsiz dağılımlarda simetrinin durumlarının olasılık dağılımındaki sırası, simetrik olasılıkları etkiler. Bu nedenle farklı dizilimsiz dağılımlarda, simetrinin durumlarının bulunabileceği olaylara göre simetrik olasılık eşitlikleri, simetrinin durumlarının olasılık dağılımındaki sıralamalarına göre de ayrı ayrı verilecektir. Simetrinin durumlarının olasılık dağılımındaki sıralamalarına göre verilmesi gereken eşitlik sayısı, farklı dizilimli dağılımlara göre fazladır. Bağımlı olasılıklı dağılımlarla elde edilebilecek yeni dağılımlardaki simetrik olasılık eşitliklerinin çıkarılmasında, bağımlı olasılıklı dağılımlarda simetrinin durumlarının bulunabileceği olaylara göre simetrik olasılık eşitlikleri kullanılabileceğinden, farklı dizilimsiz dağılımların eşitlikleri olasılık dağılımının başladığı durumlara göre de verilecektir. Farklı dizilimsiz dağılımlardaki tanım ve eşitlikler farklı dizilimli dağılımlardaki sıralamada verilecektir. Farklı dizilimsiz dağılımlarda simetrik olasılığın, düzgün ve düzgün olmayan terimlerle birlikte verilen tanım eşitlikleri, farklı dizilimsiz dağılımlar için verilmeyecektir.

Bu bölümde farklı dizilimli dağılımlardaki simetrik için verilen tanım ve eşitliklerden bir kısmı VDOİHİ cilt 2.2.1'de verilmiştir. Daha önceki ciltte verilen eşitlikler, bu bölümde düzenlenerek ve simetriden seçilebilecek daha fazla duruma göre yeni eşitlikler çıkarılarak verilmektedir. Farklı dizilimsiz dağılımlarda simetrinin durumlarının bulunabileceği olaylara göre simetrik olasılıklar için yapılan tanımlar bu bölümde kullanılmakta fakat eşitlikleri yeniden düzenlenerek verilmektedir. Ayrıca bu bölümde farklı dizilimsiz dağılımlardaki simetri için simetriden seçilebilecek daha fazla durumun bulunabileceği olaylara göre, tanım ve eşitlikler üretilerek verilmektedir.

Simetrinin durumlarının bağımlı olasılık farklı dizilimsiz dağılımlarındaki sırasına göre verilen eşitliklerdeki toplama alma sınır değerleri, simetrinin küçükten büyüğe sıralanan dağılımlarına göre verilmiştir. Bu eşitliklerde simetrinin durumları yer değiştirilerek, büyükten küçüğe sıralanan dağılımlar için simetrik olasılık eşitlikleri elde edilir.

Bu cilde bağımlı durum sayısı bağımlı olay sayısından büyük farklı dizilimsiz dağılımlardaki simetrik bitişik olasılıklar; simetriden seçilecek bir duruma, simetrinin ilk ve son durumuna, simetrinin ilk ve herhangi bir durumuna, simetrinin herhangi iki durumuna, simetrinin ilk ve herhangi iki durumuna, simetrinin ilk herhangi bir ve son durumuna ve simetrinin ilk herhangi iki ve son durumuna göre verilmektedir.

GÜLDÜNYA

BAĞIMLI OLASILIKLI FARKLI DİZİLİMSİZ SİMETRİK BİTİŞİK OLASILIK

Bağımlı olasılıklı farklı dizilimli dağılımlarda, düzgün ve düzgün olmayan simetrik olasılıklardan farklı, bitişik ve ayrım olasılıkları simetrinin aranacağı duruma bağlı olarak tanımlanmıştı. ***Bitişik olasılık***, simetrinin herhangi iki bağımlı durumu (veya ikiden daha fazla) arasında simetride bulunmayan bağımlı durumların bulunmadığı dağılım sayısıdır. Bitişik olasılıklar bağımlı olasılıklı farklı dizilimsiz dağılımlarda bulunduğunda, ***bağımlı olasılıklı farklı dizilimsiz simetrik bitişik olasılık*** denir. Düzgün simetrik olasılıktan farklı bitişik olasılık herhangi iki bağımlı duruma göre düzgün simetrik yapı olmasına karşılık, aynı dağılımda simetrinin diğer durumları arasında simetride bulunmayan bağımlı durumlar bulunabilir. Bu nedenle bir dağılım iki bağımlı duruma göre bitişik (düzgün) olabilirken aksine karşılık, düzgün olmayan simetrik yapılı olabilir. Seçilecek durumlardan ilk simetrinin ilk ve son durumları olması durumunda simetrik bitişik olasılıklar, düzgün simetrik olasılığa eşit olur. ***Ayrım olasılığı*** ise simetrinin herhangi iki bağımlı durumu (veya ikiden daha fazla) arasında simetride bulunmayan bağımlı durumların bulunduğu dağılımların sayısıdır. Ayrım olasılıkları bağımlı olasılıklı farklı dizilimsiz dağılımlarda bulunduğunda, ***bağımlı olasılıklı farklı dizilimsiz simetrik ayrım olasılığı*** denir. Bitişik olasılığın aksine her bir ayrım olasılığı aynı zamanda düzgün olmaya simetrik olasılıklıdır. Bitişik olasılıklı dağılımlarda da düzgün olmayan simetrik durumlar bulunabilmesinden, ayrım olasılığı düzgün olmayan simetrik olasılığa eşit olmayabilir. Bitişik olasılık, düzgün simetrik olasılığa ve ayrım olasılığıda, düzgün olmayan simetrik olasılığa simetrinin ilk ve son durumlarına göre hesaplandığında eşit olur. Bağımlı olasılıklı farklı dizilimli dağılımlarda bağımlı ve bir bağımsız olasılıklı dağılımlarda, simetrinin bağımlı durumları arasında bağımsız durum bulunduğunda, simetrik olasılık eşitliklerinin çıkarılmasında kullanılabilecek simetrik bitişik ve ayrım olasılıkları tanımlanacaktır. *Bağımlı olasılıklı farklı dizilimsiz dağılımların her durumu art arda olaylarda bulunmayabilir. Bu nedenle simetrinin durumlarının bağımlı olasılıklı farklı dizilimsiz dağılımın hangi olaylarında bulunabileceği bölüm C'de ilk düzgün simetrik olasılık başlığında verilen eşitlikler kontrol edilmelidir. Eğer simetrinin herhangi iki durumu belirli iki olayda art arda bulunamıyorsa, bu o olaylarda bulunan simetrik durumlar için ayrım olasılığıdır. Düzgün-düzgün olmayan simetrik olasılıklarda ve bitişik-ayrım olasılıklarının eşitliklerinde bu durum koşullu eşitlik tanımlamalarında dikkate alınacak olmasına rağmen tüm koşullar için simetrinin hangi olaylarda bulunabileceğini vermeyebileceği dikkate alınmalıdır!*

GÜLDÜNYA

SİMETRİDEN SEÇİLEN BİR DURUMA GÖRE SİMETRİK BİTİŞİK OLASILIK

Bağımlı olasılıklı farklı dizilimli dağılımlarda, simetrinin son iki bağımlı durumu arasında simetride bulunmayan bağımlı durumların bulunmadığı, simetrinin son bağımlı durumunun

bulunabileceği olaylara bağlı, simetrik durumların bulunduğu dağılımların sayısı; simetrinin son durumunun bulunabileceği olaylara göre bağımlı olasılıklı farklı dizilimsiz simetrik olasılık eşitliğinin düzenlenmesinden elde edilebilir. Bağımlı olasılıklı farklı dizilimsiz dağılımlarda, simetrinin son iki bağımlı durumu arasında simetride bulunmayan bağımlı durumların bulunmadığı, simetrinin son bağımlı durumuna göre, bağımlı olasılıklı farklı dizilimsiz simetrik bitişik olasılıklar için,

$$ {}_{fz}S_{j_i \Leftarrow} = \sum_{k=1}^{D-\boldsymbol{n}+1} \sum_{j_i=\boldsymbol{l_i}+\boldsymbol{n}-D}^{\boldsymbol{l_i}-k+1} \frac{(\boldsymbol{l_{sa}} - k - j_{sa})!}{(\boldsymbol{l_{sa}} + s - k - j_i - j_{sa} + 1)\ (j_i - k - 1)!} \cdot \frac{(D - \boldsymbol{l_i})!}{(D + j_i - k - \boldsymbol{l_i})! \cdot (\boldsymbol{n} - j_i)!} $$

D: bağımlı durum sayı

n: olay sayısı (veya toplam olay sayısı)

***$\boldsymbol{n}$**: bağımlı olay sayısı veya bağımlı olasılıklı dağılımın olay sayısı*

s: simetrinin bağımlı durum sayısı

***$\boldsymbol{s}$**: simetrik durum sayısı. Simetrinin bağımlı bağımsız durum sayısı*

k: dağılımın başladığı bağımlı durumun, bağımlı olasılıklı farklı dizilimsiz dağılımlardaki sırası

j_i: simetrinin son bağımlı durumunun, bağımlı olasılıklı dağılımlarda bulunabileceği olayların, son olaydan itibaren sırası

j_{sa}^{i}: simetriyi oluşturan bağımlı durumlar arasında, simetrinin son bağımlı durumun bulunduğu olayın, simetrinin son olayından itibaren sırası $\left(j_{sa}^{i} = s\right)$

***$\boldsymbol{l}$**: seçilenen bağımlı durumun, bağımlı olasılıklı farklı dizilimsiz dağılımlardaki sırası ($\boldsymbol{l} = 1$ ise bağımlı olasılık dağılımlarının ilk durumu, $\boldsymbol{l} = 2$ ise bağımlı olasılık dağılımlarının ikinci durumu, $\boldsymbol{l} = 3$ ise bağımlı olasılık dağılımlarının üçüncü durumu, … , $\boldsymbol{l} = D$ ise bağımlı olasılık dağılımın son durumu)*

***${}_{i}\boldsymbol{l}$**: simetrinin ilk bağımlı durumunun, bağımlı olasılık farklı dizilimsiz dağılımın son olayı için sırası. Simetrinin sonuncu bağımlı olayındaki durumun, bağımlı olasılık farklı dizilimsiz dağılımlarındaki sırası*

$${}_{i}\boldsymbol{l} = 1, 2, 3, \dots, D$$

GÜLDÜNYA

$\boldsymbol{l_i}$*: simetrinin son bağımlı durumunun, bağımlı olasılıklı farklı dizilimsiz dağılımlardaki sırası. Simetrinin birinci bağımlı olayındaki durumun, bağımlı olasılık farklı dizilimsiz dağılımlarındaki sırası*

j_{sa}*: simetriyi oluşturan bağımlı durumlar arasında simetrinin aranacağı durumun bulunduğu olayın, simetrinin son olayından itibaren sırası. Simetrinin iki bağımlı durumu arasında bağımsız durum bulunduğunda, bağımsız durumdan sonraki ilk bağımlı durumun bulunduğu olayın, simetrinin son olayından itibaren sırası (bağımsız durumlar dikkate alınmadan!)*

$j_{sa}: 2, 3, 4, \dots, s-1$

örneğin: $\{0,0,0,1,2,0,0,0,\mathbf{3},4,5\} \Rightarrow j_{sa} = 3$ *veya* $\{0,0,0,1,2,0,0,0,\mathbf{6},4,5\} \Rightarrow j_{sa} = 3$ *veya* $\{0,0,0,1,2,0,0,0,\mathbf{2},3,4,5\} \Rightarrow j_{sa} = 2$ *veya* $\{0,0,0,1,0,0,0,\mathbf{6},3,4,5\} \Rightarrow j_{sa} = 2$ *veya* $\{0,0,0,1,2,3,4,0,0,\mathbf{5}\} \Rightarrow j_{sa} = 5$ *veya* $\{0,0,0,1,2,3,4,0,0,0,\mathbf{6}\} \Rightarrow j_{sa} = 5$

j^{sa}*: j_{sa}'da bulunan durumun bağımlı olasılıklı dağılımda bulunduğu olayın son olaydan itibaren sırası*

$j^{sa}: j_{sa}, j_{sa}+1, j_{sa}+2, \dots, \boldsymbol{n}-s+j_{sa}$

$\boldsymbol{l_{sa}}$*: simetrinin aranacağı bağımlı durumunun, bağımlı olasılıklı farklı dizilimsiz dağılımlardaki sırası. Simetrinin aranacağı bağımlı olayındaki durumun, bağımlı olasılık farklı dizilimsiz dağılımlardaki sırası*

j_s*: simetrinin ilk bağımlı durumunun, bağımlı olasılıklı dağılımlarda bulunabileceği olayların, son olaydan itibaren sırası*

j_{sa}^{s}*: simetriyi oluşturan bağımlı durumlar arasında, simetrinin ilk bağımlı durumun bulunduğu olayın, simetrinin son olayından itibaren sırası* $(j_{sa}^{s} = 1)$

$\boldsymbol{l_s}$*: simetrinin ilk bağımlı durumunun, bağımlı olasılıklı farklı dizilimsiz dağılımlardaki sırası. Simetrinin sonuncu bağımlı olayındaki durumun, bağımlı olasılık farklı dizilimsiz dağılımlarındaki sırası*

$_{i}\boldsymbol{l} = \boldsymbol{l}_{j_{ik}}$

j_{ik}*: simetride, simetrinin aranacağı durumdan önce bulunan bağımlı durumun, bağımlı olasılıklı dağılımlarda bulunabileceği olayların, son olaydan itibaren sırası veya simetrinin iki bağımlı durum arasında bağımsız durumun bulunduğunda bağımsız durumdan önceki bağımlı durumun bağımlı olasılıklı dağılımlarda bulunabileceği olayların son olaydan itibaren sırası*

$bitişik\ olasılık \Rightarrow j_{ik}: j^{sa}-1$

$ayrım\ olasılığı \wedge j^{sa} \geq j_{sa}+1 \Rightarrow j_{ik}: j_{sa}-1, j_{sa}, j_{sa}+1, \dots, j^{sa}-2$

GÜLDÜNYA

$$(j_{ik} - j_{sa} + 1) = \left(j_{ik} - (j_{sa} - 1)\right) \rightarrow j_{sa} - 1 = j_{sa}^{ik} \rightarrow \left(j_{ik} - j_{sa}^{ik}\right)$$

j_{sa}^{ik}: simetriyi oluşturan bağımlı durumlar arasında simetrinin aranacağı durumdan önceki bağımlı durumun bulunduğu olayın, simetrinin son olayından itibaren sırası. Simetrinin iki bağımlı durumu arasında bağımsız durum bulunduğunda, bağımsız durumdan önceki ilk bağımlı durumun bulunduğu olayın, simetrinin son olayından itibaren sırası

eşitliği elde edilir. Bu eşitliğe simetrinin son durumunun bulunabileceği olaylara göre bağımlı olasılıklı farklı dizilimsiz simetrik bitişik olasılık eşitliği denir. Bağımlı olasılıklı farklı dizilimsiz dağılımlarda, simetrinin son iki bağımlı durumu arasında simetride bulunmayan bağımlı durumlar bulunmadan, simetrinin son bağımlı durumunun bulunabileceği olaylara bağlı; simetrik durumların bulunduğu dağılımların sayısına ***simetrinin son durumunun bulunabileceği olaylara göre bağımlı olasılıklı farklı dizilimsiz simetrik bitişik olasılık*** denir. Simetrinin son durumunun bulunabileceği olaylara göre bağımlı olasılıklı farklı dizilimsiz simetrik bitişik olasılık ${}_{fz}S_{j_i \Leftarrow}$ ile gösterilecektir.

GÜLDÜNYA

VDOİHİ'de Olasılık ve İhtimal konularının tanım ve eşitlikleri verilmektedir. Ayrıca VDOİHİ'de olasılık ve ihtimalin uygulama alanlarına da yer verilmektedir. VDOİHİ konu anlatım ciltleri ve aynı cilt numaraları ile soru, problem ve ispat çözümlerinden oluşmaktadır. Bu cilt bağımlı olasılıklı farklı dizilimsiz olasılık dağılımlarında, simetrinin belirli durumlarının bulunabileceği olaylara göre simetrik bitişik olasılığın, tanım ve eşitliklerinden oluşmaktadır.

VDOİHİ Bağımlı Olasılıklı Farklı Dizilimsiz Dağılımlarda Simetrinin [illegible]larının Bulunabileceği Olaylara Göre Simetrik Bitişik Olasılık kitabında, bağımlı durum [illegible] bağımlı olay sayısından büyük farklı dizilimsiz dağılımlarda; simetriden [illegible]çilecek bir durum simetrinin ilk ve son durumuna, simetrinin ilk ve herhangi bir durumuna, simetrinin herhangi iki durumuna, simetrinin ilk ve herhangi iki durumuna, simetrinin ilk herhangi bir ve son durumuna ve simetrinin ilk herhangi iki ve son durumlarının bulunabileceği olaylara göre simetrik bitişik olasılığın, tanım ve eşitlikleri verilmektedir.

VDOİHİ'nin diğer ciltlerinde olduğu gibi bu [illegible]de verilen tüm eşitlikler, olasılık tablolarından elde edilen verilerle üretilmiştir. Diğer [illegible]sitlikler ise ana eşitliklerden teorik yöntemle üretilmiştir. Eşitlik ve tanımların üretilmesinde [illegible] kaynak kullanılmamıştır.
