1. Bağımlı olasılıklı farklı dizilimsiz düzgün olmayan simetrik olasılık 2. Simetrinin üç durumunun bulunabileceği olaylara göre iki duruma bağlı bağımlı olasılıklı farklı dizilimsiz düzgün olmayan simetrik olasılık 3. Simetrinin dört durumunun bulunabileceği olaylara göre iki duruma bağlı bağımlı olasılıklı farklı dizilimsiz düzgün olmayan simetrik olasılık 4. Simetrinin dört durumunun bulunabileceği olaylara göre üç duruma bağlı bağımlı olasılıklı farklı dizilimsiz düzgün olmayan simetrik olasılık

Dili: Türkçe + Matematik Mantık

Yazar Hakkında

İsmail YILMAZ; Hamzabey Köyü, Yeniçağa, Bolu'da 1973 yılında doğdu. İlkokulu köyünde tamamladıktan sonra, ortaokulu Yeniçağa ortaokulunda tamamladı. Liseyi Ankara Ömer Seyfettin ve Gazi Çiftliği Liselerinde okudu. Lisans eğitimini Çukurova Üniversitesi Fen Edebiyat Fakültesi Fizik bölümünde ve doktora eğitimini Gazi Üniversitesi Eğitim Bilimleri Enstitüsü Fen Bilgisi Eğitimi Anabilim Dalında tamamladı. Fen Bilgisi Eğitiminde; Newton'un hareket yasaları, elektrik ve manyetizmanın prosedürel ve deklaratif bilgi yapılarıyla birlikte matematik mantık yapıları üzerine çalışmalar yapmıştır. Yazarın ilk alanlarda yapmış olduğu çalışmalar arasında ölçme ve değerlendirmeye yönelik çalışmaları da mevcuttur.

Yazar ve VDOİHİ

Yazar doktora tez çalışmasına kadar, dijital makinalarla sayısallaştırılabilen fakat insan tarafından sayısallaştırılamayan verileri, **a**nlamlı **k**üçük **p**arça (akp)'lara ayırıp skorlandırarak, sayısallaştırma problemini çözmüştür. Anlamlı en küçük parçaların Türkçe kısaltmasını olasılığın birimlendirilebilir olmasından dolayı, olasılığın birimini akp olarak belirlemiştir. Matematiğinin başlangıcı olasılık olup tüm tanımlı değişkenlerde olabileceği gibi aynı zamanda enformasyonunda temeli olasılık olduğundan enformasyon içeriğinin de doğal birimi akp'dir.

Verilerin objektif lojik sempliste sayısallaştırılmasıyla **V**eri **D**eğişkenleri **O**lasılık ve **İ**htimal **H**esaplama **İ**statistiği (VDOİHİ) geliştirilmeye başlanmıştır. Doktora tezinin nitel verilerini, bir ilk olarak, -1, 0, 1 skorlarıyla sayısallaştırarak iki tabanlı olasılığı sınıflandırıp; pozitif, negatif (ve negatiflerdeki pozitif skorlar için ayrıca eşitlik tanımlaması yapılıp), ilişkisiz ve sıfır skor aşamalarıyla değerlendirme yöntemi geliştirmiştir. Bu yöntemin tüm kavramlarının; tanım ve formüllerinin sınırları belirlenip, kendi içinde tam bir matematiği geliştirilip, uygulamalarla veri elde edilmiş, verilerin hem değerlendirmeleri hem de bulguların sözel ifadelerini veren yazılım paket programı yapılarak, bir disiplinin tüm yönleri yazar tarafından gerçekleştirilerek doktorasını bilim tarihinde yine bir ilk ile tamamlamıştır. Nitel verilerden elde edilebilecek bulguların sözel ifadelerini veren yazılım paket programı gerçek olması gereken yapay zekanın ilk örneğidir.

Yazar, ölçme araçları için madde tekniği tanımlayıp, değerlendirme yöntemlerini belirginleştirilerek, eğitimde ölçme ve değerlendirme için beş yeni boyut aktiflemiştir. Ölçme ve değerlendirmeye, aktif ve pasif değerlendirme tanımlaması yapılarak, matematiği geliştirilmiş ve geliştirilmeye devam edilmektedir. Yazar yaptığı çalışmalarda **P**roblem **Ç**özüm **T**eknikleri (PÇT) aktifleyerek; verilenler-istenilenler (Vİ), serbest cisim diyagramı/çizim (SCD), tanım, formül ve işlem aşamalarıyla, eğitimde ölçme ve değerlendirmede beş boyut daha aktiflemiştir. PÇT aşamalarını bilgi düzeyi, çözümlerin sonucunu da başarı düzeyi olarak tanımlayıp, ölçme ve değerlendirme için iki yeni boyut daha kazandırmıştır. Sınıflandırılmış iki tabanlı olasılık yönteminin aşamaları ve negatiflerdeki pozitiflerle, ölçme ve değerlendirmeye beş yeni boyut daha kazandırılmıştır. Verilerin; Shannon eşitliği veya VDOİHİ'de verilen olasılık-ihtimal eşitlikleriyle değerlendirmeyi bilgi

GÜLDÜNYA

d

merkezli, matematiksel fonksiyonlarla (lineer, kuvvet, trigonometri “sin, cos, tan, cot, sinh, cosh, tanh, coth”, ln, log, eksponansiyel v.d.) değerlendirmeyi ise birey merkezli değerlendirme, sınırlandırması getirerek, değerlendirmeye iki yeni boyut daha kazandırmıştır. Ayrıca $\frac{a}{b}+\frac{c}{d}$ ve $\frac{a+c}{b+d}$ matematiksel işlemlerinin anlam ve sonuç farklılıklarını, değerlendirme için aktifleyerek, değerlendirmeye iki yeni boyut daha kazandırmıştır. Böylece eğitimde ölçme ve değerlendirmeye; PÇT aşamaları 5×5, yine PÇT'nin bilgi ve başarı düzeylerinin 2×2, sınıflandırılmış iki tabanlı olasılık yöntemi 5×5, bilgi ve [illegible] merkezli ölçme ve değerlendirmeyle 2×2, matematiksel işlem farklılıklarıyla 2×2 [illegible]mak üzere 40.000 yeni boyut kazandırmıştır. Bu boyutlara yukarıda verilen matematiksel fonksiyonlarında dahil edilmesiyle en az (13×13) 6.760.000 yeni boyut[illegible] primitif bir[illegible]de, ölçme ve değerlendirmeye, katılabilmesinin yolu yazar tarafından açılmış olmasına rağmen, günümüze kadar yukarıda bahsedilen boyutların ilgi düzeyinde eğitimde ölçme ve değerlendirmede, tek boyuttan öteye (lineer değerlendirme) geçirilememiştir. Bu noktadan sonra, ölçme ve değerlendirmeye fark istatistiğiyle boyut kazandırılabilmiştir. Fark istatistiğiyle kazandırılan boyutlarında hem ihtimaller çıkarılacak yeni boyutlar hem de ihtimallerin fark istatistiğinden türetilebilecek boyutların yanında gizli kalacağı kesin! Ölçme ve değerlendirmeye yeni boyutlar kazandırılmasının en önemli amaçları; beynin öğrenme yapısının kesin bir şekilde belirlenebilmesi ve öğretim süreçlerinin bilimsel bir şekilde yapılandırılabilmesidir. Beyine ilgili VDOİHİ Bağımlı Olasılık Cilt 1'in giriş bölümünde verilenlerin genişletilmesine bu şekilde devam edilecektir. Fakat öğretim süreçlerinin; teorik öngörülerle ve/veya insanın yaradılışına uyma olasılığı son derece düşük doğrusal değerlendirmelerle yapılandırılması, yazar tarafından insanlığa ihanet olarak görüldüğünden, doğru verilerle eğitimin bilimsel niteliklerde yapılandırılabilmesi için, ölçme ve değerlendirmeye yeni boyutlar kazandırılmalıdır.

Günümüze kadar yaşayan dillerin 10 kavramı bile kazandırabilen hemen hemen yokken, yayınlanan VDOİHİ ciltlerinde (cilt 2, 2.2.1, 2.3.1 ve 2.3.2) yaklaşık 1000 kavram Türkçeye kazandırılarak ciltlerin dizinlerinde verilmiştir. Bu kavramların tüm sınırları belirlenip, açıklık ve anlaşılır tanımlarıyla birlikte, eşitlikleri de verilmiştir. Bu düzeyde yani bilimsel düzeyde bilime kavramlar Türkçe olarak kazandırılmıştır. Yayınlanacak VDOİHİ'lerde bilime Türkçe kazandırılacak kavramların on binler düzeyinde olacağı öngörülmektedir.

VDOİHİ'de verilen eşitlikler aynı zamanda dillerinde eşitlikleridir. Diğer bir ifadeyle dillerin matematik yapıları VDOİHİ ile ortaya çıkarılmıştır. Türkçe ve İngilizcenin olasılık yapıları VDOİHİ ile belirlenerek, formüllerin dillere (ağırlıklı Türkçe) uygulamalarıyla hem dillerin objektif yapıları belirginleştiriliyor hem de makina-insan arası iletişimde, makinaların iletişim kabiliyetinde en üst dil olarak Türkçe geliştiriliyor. İleriki ciltlerde Türkçenin matematik mantık yapısı da verilerek, Türkçe'nin makinaların iletişim dili yapılması öngörülmektedir.

Bilim(de) kesin olanla ilgileni(li)r, yani bilim eşitlik ve/veya yasa üretir veya eşitliklerle konuşur. Bunun mümkün olmadığı durumlarda geçici çözümler üretilebilir. Bu geçici çözümler veya yöntemleri, her hangi bir nedenle bilimsel olamaz. Bilimin yasa veya eşitlik üretimindeki kırılma, Cebirle başlamıştır. Bilimdeki bu kırılma mühendisliğin, teknolojiye

GÜLDÜNYA

dönüşümünün başlangıcıdır. Bilimdeki kırılma ve mühendisliğin teknolojiye dönüşümü, insanlığın gelişimini hızlandırmakla birlikte, bu alanda çalışanların; ego, öngörüsüzlük, ufuksuzluk ve beceriksizlikleri gibi nedenlerden dolayı, insanlığın gelişimi ivmelendirilemediği gibi bu basiretsizliklerle insanlığa pranga vurmayı bile kısmen başarabilmişlerdir. VDOİHİ ve telifli eserlerinde verilen; değişken belirleme, eşitlik-yasa belirleme ve bunların sözel yorumlarını yapabilen yazılımlarla, ve yapılabilecek benzeri yazılımlarla, insanlığın gelişimi ivmelendirilebileceği gibi isteyen her birey, gerçeklerin (VDOİHİ Bağımlı Olasılık Cilt 1'in giriş bölümünde tanımlanmıştır) bilgi ve [illegible]isine daha kolay ulaşabilme imkanı sağlanmıştır.

Şuana kadar zaruri tüm tanımların, zaruri tüm eşitliklerin ve bunların epistemolojik [illegible] (0. epistemolojik seviye) en azından 1. epistemolojik seviye bilgil[illegible]in birlikte verildiğine ilk yada ilk örneklerinden biri VDOİHİ'dir. Bu kapsamda VDOİHİ'de [illegible] kadar yaklaşık 1000 kavramın, bilime kazandırıldığı yukarıda belirtilmişti. Bu kapsamda yine VDOİHİ'de 5000'in üzerinde orijinal; ilk ve yeni eşitlik geliştirilmiştir. Bu eşitlikler kasıtlı olarak ilk defa dört farklı yapıda birlikte verilmektedir. Bu eşitlikler a) sabit değişkenli (örneğin; bağımlı olasılıklı farklı dizilimli simetrik olasılık eşitlikleri) b) sabit değişkenli işlem uzunluklu (örneğin; simetrinin son durumunun bulunabildiği olaylara göre bağımlı olasılıklı farklı dizilimli simetrik olasılık eşitliği) c) hem değişken uzunluklu hem işlem uzunluklu (örneğin; simetrinin her durumunun bulunabildiği olaylara göre bağımlı olasılıklı farklı dizilimli simetrik olasılık eşitliği) d) sabit değişkenli zıt işlem uzunluklu (bu eşitlik VDOİHİ cilt 2.1.3'ten itibaren verilecektir. Örneğin; $\sum_{i=}^{} $) yapılarda verilmektedir. Sabit değişkenli eşitliklerle, bilim ve teknolojideki gelişimin[illegible]in çoğunluğu karşılanabilirken, geleceğin bilim ve teknolojisinde ihtiyaç duyulabilecek eşitlik yapıları kasıtlı olarak aktiflenmiş veya geliştirilmiştir.

İnsanın hem öğrenmesinin desteklenmesi hem de bilginin teknolojiyle ilişkisini kurabilmesi için özellikle VDOİHİ Soru Problem ve Çözümleri ciltlerinde, soru ve problem birbirinden ayrılarak yeniden tanımlanıp sınırları belirlenmiştir. Böylece örnek, soru, problem ve ispat arasındaki farklılıklar belirginleştirilmiştir. Ayrıca yine insanın hem öğrenmesinin desteklenmesi hem de bilginin teknolojiyle ilişkisini daha kesin kurabilmesi için Sertaç ÖZER'in İlmi Sohbetler eserinin M5-M6 sayfalarında verilen epistemolojik seviye tanımları; örnek, soru, problem ve ispatlara uyarlanmıştır. Böylece; örnek, soru, problem ve ispatların epistemolojik seviyeyle, hem bilgiyle-öğrenme arasında hem de bilgi-teknoloji arasında yeni bir köprü kurulmuştur.

Geride bıraktığımız yüzyılda, özellikle Turing ve Shannon'un katkılarıyla iki tabanlı olasılığa dayalı dijital teknoloji kurulabilmiştir. Kombinasyon eşitliğiyle iki tabanlı simetrik olasılıklar hesaplanabildiğinden, ihtimalleri de kesin olarak hesaplanabilir. İkiden büyük tabanların; bağımsız olasılık, bağımlı olasılık, bağımlı-bağımsız olasılık, bağımlı-bağımlı olasılık veya bağımsız-bağımsız olasılık dağılımlarındaki simetrik olasılıkları VDOİHİ'ye kadar kesin olarak hesaplanamadığından (hatta VDOİHİ'ye kadar olasılığın sınıflandırılması bile yapılmamış/yapılamamıştır), farklı tabanlarda çalışabilecek elektronik teknolojisi kurulamamıştır. VDOİHİ'de verilen eşitliklerle, hem farklı olasılık dağılımlarında hem de her tabanda simetrik olasılıkların olabilecek her türü, hesaplanabilir kılındığından, ihtimalleri de

GÜDÜNYA

f

kesin olarak hesaplanabilir. Böylece VDOİHİ'de verilen eşitliklerle hem istenilen tabanda hem de istenilen dağılım türlerinde çalışabilecek elektronik teknolojisinin temel matematiği kurulmuştur. Bundan sonraki aşama bilginin-ürüne dönüşme aşamasıdır. Ayrıca VDOİHİ'de özellikle uyum eşitlikleri kullanılarak farklı dağılım türlerine geçişin yapılabileceği eşitliklerde verilerek, dijital teknoloji yerine kurulacak her tabanda ve/veya her dağılım türünde çalışan teknolojinin istenildiğinde de hem farklı taban hem de farklı dağılım türlerine geçişinin yapılabileceği matematik eşitlikleri de verilmiştir. Böylece tek bir tabana dayalı dijital teknoloji yerine, sonsuz çalışma prensibine dayalı elektronik teknolojinin kavramsel-matematiksel yapısı VDOİHİ ile kurulmuş ve kurulmaya devam etmektedir.

VDOİHİ'de verilen eşitlikler aynı zamanda en küçük biyolojik birimden itibaren tüm canlı temel biyolojik birimin "genetiğin" temel matematiğidir. En küçük biyolojik birim olarak DNA alındığında, VDOİHİ'de verilen eşitlikler DNA, RNA, Protein, ... teknolojilerinin temel eşitlikleridir. Bu eşitlikler VDOİHİ'de teorik düzeyde DNA, RNA, Protein, Gen ve hastalıklarla ilişkilendirilmektedir. Bu eşitlikler gelecekte atom düzeyinden başlanarak en kompleks biyolojik birimlere kadar tüm biyolojik birimlerin laboratuvar ortamlarında üretiminin planlı ve kontrollü yapılabilmesinde ihtiyaç duyulacak temel eşitliklerdir. Böylece bir canlının, örneğin insanın, atom düzeyinden başlanarak laboratuvar ortamında üretilebilir/yapılabilir kılınmasının, matematiksel yapısı ilk defa VDOİHİ'de verilmektedir. Elbette bir insanın laboratuvar ortamında üretilebilir olmasıyla, bunun gerçekleştirilmesi aynı değildir. Gerçekleştirilebilmesi için dini, etik, ahlaki v.b. aşamalarda da doğru kararların verilmesi gerekir. Fakat organların v.b. biyolojik birimlerin laboratuvar ortamında üretilmesinin önünde benzer aşamaların engel oluşturduğu söylenemez. İhtiyaç halinde bir insanın; organının, sisteminin veya uzvunun v.b. her yönüyle aynısının laboratuvar ortamında üretilmesi veya soyu tükenmiş bir canlının yeniden üretimi veya soyunun son örneği bir canlı türünün devamı VDOİHİ'de verilen eşitlikler kullanılarak sağlanabilir. Biyolojik bir yapının laboratuvar ortamında üretimiyle, örneğin herhangi bir makinanın üretilmesinin İslam açısından aynı değerde olduğunu düşünüyorum. Bu yaradan'ın bize ulaşabilmemiz için verdiği bir izdir. Eğer araştırılması istenmeseydi, bizim öyle bir imkanımızda olamazdı. Fakat bilginin, bizim ulaşabileceğimiz bilgi olması, yani gerçeğin bilgisi olması, her zaman ve her durumda uygulanabilir olacağı anlamına gelmez. Umarım yapmak ile yaratmak birbirine karıştırılmaz!

VDOİHİ'de hem sonsuz çalışma prensibine dayalı elektronik teknolojisinin matematiksel yapısı hem de Telifli eserlerinde ve VDOİHİ'de, ilk defa yapay zeka çağının kapılarını aralayan çalışmalar yapılmıştır. VDOİHİ cilt 2.1.1'in giriş bölümünde yapay zeka ve çağının tanımı yapılarak, kütüphane ve referans bilgileriyle ilişkilendirilmiştir. Daha sonra VDOİHİ ve Telifli eserlerinde insanlığın gelişimini ivmelendirecek; yapay zeka görev kodları, verilerin analizlerine ait olduğu disiplinlin belirlenmesi, verinin analizinden verilen ve istenilenlerin belirlenmesi, değişken analizi, eksik değişkenlerin belirlenmesi, eksik değişkenlerin verilerinin üretimi, değişkenler arası eşitliklerin kurulması ve elde edilen bilgilerin sözel ifadeleriyle bilim ve teknoloji için gerekli bilgiyi üretebilen yazılımlar verilmiştir. Hem bu yazılımlarla hem de benzeri yazılımlarla, bilim insanları tarafından üretilemeyen bilgi ve teknolojilerin isteyen her kişi tarafından üretilebilir olması sağlanmıştır. Ayrıca kütüphane ve referans bilgilerinin üretiminde, olasılık dağılımları üzerinden çalışan makinaların bir olayın

GÜLDÜNYA

tüm yönlerini (olasılıklarını) kullanmaları sağlanarak, tıpkı insan gibi düşünebilmesi sağlanmıştır. Böylece makinaların özgürce düşünebilmesinin önündeki engeller kaldırılmıştır. Gerçek yapay zeka pahalı deneylere ihtiyacı ortadan kaldırarak, insanlara yaradan'ın tanıdığı eşitliklerin (matematiksel eşitlik değil!), belirli insanlar tarafından saptırılarak, diğerlerinin eşitlik ve özgürlerinin gasp edilmesinin önünde güçlü bir engel teşkil edecektir. Bugüne kadar artifical inteligence çalışmalarıyla sadece ve sadece kütüphane bilgisinin bir kısmı üretilebildiği ve kütüphane bilgisi üretebilen teknoloji geliştirildiğinden, bunlar yapay zekanın öncü çalışmalarından öte geçip yapay zeka konumunda düşünülemez. Gerçek yapay zeka hem kütüphane hem de referans bilgisi üretebilir olması gerektiğinden; a) yazar tarafından doktora tez çalışması başta olmak üzere belirli çalışmalarında kütüphane bilgisinin ileri örneklerinin başarıldığından, b) ilk defa VDOİHİ ve Telifli eserlerinde referans bilgisini üreten yazılımlar başarıldığından ve c) yapay zekanın gereksinim duyabileceği dijital teknoloji yerine, enerjisiz çalışma prensibine dayalı elektronik teknolojisinin bilimsel-matematiksel yapısı yazar tarafından geliştirildiğinden, insanlığın bugüne kadar uyguladığı teamüller gereği adlandırmanın da Türkçe yapılması elzem ve adil bir zorunluluktur. Bu nedenle insan biyolojisinin ürünü olmayan zeka "yapay zeka" yerine insan biyolojisinin ürünü olamayan zekayla insanlığın gelişiminin ivmelendirildiği zaman periyodu da "yapay zeka çağı" olarak adlandırılmalıdır.

Yazar tarafından VDOİHİ'de, Cebirde günümüze; a) bilimsel gelişim, olması gereken veya olabilecek gelişime göre düşük olduğundan, b) teorik çalışmaların omurgasının matematiğe terk edilmesi ve matematikçilerinde üzerlerine düşeni yerine getirememelerinden dolayı, c) yapay zeka karşısında buhrana düşülmesinin önüne geçilebilmesi ve d) kainatın en kompleks birimi olan insan beynine dokunulmadan bilimsel gelişimin başarılabilmesi için, yasa/eşitliklerin, uyum ve genel yapıları, olasılık üzerinden belirlenmiştir.

Yazar tarafından VDOİHİ Bağımlı ve Bir Bağımsız Olasılıklı Büyük Farklı Dizilimli Simetrik Olasılık Cilt 2.2.1 de insanlığın bilimsel ve teknolojik gelişimini ivmelendirebilecek uyum çağının tanımlanmasıyla yapılarak, VDOİHİ'de ilk defa yasa/eşitliklerin, olasılık eşitlikleri üzerinden uyum yapıları verilmiştir.

Yazar tarafından VDOİHİ Bağımlı ve Bir Bağımsız Olasılıklı Farklı Dizilimsiz Simetrik Olasılık Cilt 2.3.1'de insanlığın bilimsel ve teknolojik gelişimini ivmelendirebilecek genel çağın tanımlanmasıyla yapılarak, VDOİHİ'de yasa/eşitliklerin, olasılık eşitlikleri üzerinden genel yapıları verilmiştir.

Yazar tarafından VDOİHİ Bağımlı ve Bir Bağımsız Olasılıklı Farklı Dizilimsiz Simetrik Bulunmama Olasılığı Cilt 2.3.2 insanlığın bilimsel ve teknolojik gelişimini ivmelendirebilecek dördüncü bir çağ olarak, gerçek zaman ufku ötesi çağı tanımlanmıştır. Bu çağın tanımlanmasında; Sertaç ÖZENLİ'nin İlmi Sohbetler eserinin R39-R40 sayfalarından yararlanılarak, kapak sayfasındaki ve T21-T22'inci sayfalarında verilen şuurluluğun ork or modelinin özetinin gösterildiği grafikten yararlanılmıştır. Doğada rastlanmayan fakat kuantum sayılarıyla ulaşılabilen atomlara ait bilgilerimiz, gerçek zaman ufku ötesi bilgilerimizin, gerçekleştirilmiş olanlarıdır. Gerçekleştirilebilecek olanlarından biri ise kainatın herhangi bir

GÜLDÜNYA

yerinde yaşamını sürdüren herhangi bir canlıdan henüz haberdar bile olmadan, var olan genetik bilgi ve matematiğimizle ulaşılabilir olan tüm bilgilerine ulaşılmasıdır.

Özellikle; sonsuz çalışma prensibine dayalı elektronik teknolojisi, yapay zeka, gerçek zaman ufku ötesi bilgilerimizin temel eşitliklerinin verilebilmesi, başlangıçta kurucusu tarafından yapılabileceklerin ilerleyen zamanlarda o disiplinin cazibe merkezine dönüşerek insan kaynaklarının israfının önlenebilmesi nedenleriyle ve en önemlisi Yaradan'ın bizlere verdiği adaletin insan tarafından saptırılamaması için; VDOİHİ, bugüne kadar [illegible] eserlerle kıyaslanamayacak ölçüde daha kapsamlı verilmeye çalışılmaktadır.

Yazar VDOİHİ'nin ciltlerini, Türkçe ve insanlığın tek evrensen dili olan matematik [illegible] dillerinde yazmaktadır. Yazar eserlerinden insanlığın aynı niteliklerle yararlanabilmesi için her kişiye eşit mesafede ve anlaşılırlıkta olan günümüze kadar [illegible] insanlığın geliştirebildiği yegane evrensel dilde VDOİHİ ciltlerini yazmaya devam edecektir.

VDOİHİ ve telifli eserleri ile bitirilen veya sonu başlatılanlar;

- ✓ VDOİHİ'de dillerin matematiği kurularak, o dil için [illegible] mihenk taşı gören zavallılar sınıfı
- ✓ Baskın dillerin, dünya dili olabilmesi
- ✓ VDOİHİ ve Telifli eserlerine verilen eşitlik ve yasa belirleme yazılımlarıyla, gerçeklerden uzak ve ufuksuz sözde akademisyenlere insanlığın tahammülü
- ✓ Bilim ve teknolojide sermayeye olan bağımlılık
- ✓ Sermaye birikiminin [illegible]
- ✓ Primitif ölçme ve değerlendirme

Sanırım bilgi ve teknolojideki kaderimiz verene ilişkilendirilmiş.

BAĞIMLI OLASILIKLI DAĞILIMLARDA SİMETRİNİN DURUMLARININ BULUNABİLECEĞİ OLAYLARA GÖRE SİMETRİK OLASILIK

Bağımlı Olasılıklı Farklı Dizilimli ve Farklı Dizilimsiz Bağımlı Durum Sayısı Bağımlı Olay Sayısından Büyük Dağılımlarda Simetrinin Durumlarının Bulunabileceği Olaylara Göre

- **Farklı Dizilimsiz**
  - **Toplam Düzgün Simetrik Olasılık**
  - **Toplam Düzgün Olmayan Simetrik Olasılık**

Bağımlı dağılımlar, farklı dizilimli ve farklı dizilimsiz dağılımlardan oluşur. Bağımlı durum sayısı bağımlı olay sayısına eşit farklı dizilimsiz bir dağılım olur. Bağımlı durum sayısı bağımlı olay sayısına eşit farklı dizilimli dağılımlar da simetrinin durumlarının bulunabileceği olaylara göre simetrik olasılıklar bir önceki bölümde işlendiğinden, bu bölümde bağımlı durum sayısı bağımlı olay sayısından büyük hem farklı dizilimli hem de farklı dizilimsiz dağılımlardaki simetrik olasılıklar incelenecektir.

Bağımlı olasılıklı farklı dizilimli dağılımlar; simetrinin ilk durumuyla, simetride bulunmayan bir durumla ve simetride bulunmayan durumlarla başlayan dağılımlara ayrılır. Bağımlı olasılıklı farklı dizilimsiz dağılımlar ise; dağılımın ilk durumuyla başlayan, dağılımın ilk durumdan farklı bir durumla başlayan ve dağılımın ilk durumundan farklı durumlarla başlayan dağılımlara ayrılır. Bu dağılımlarda bulunan simetrik durumların sayıları da ayrı ayrı tanımlanır. İlk simetri; farklı dizilimli dağılımlarda simetrinin ilk durumuyla başlayan dağılımlarda bulunurken, farklı dizilimsiz dağılımlarda dağılımın ilk durumuyla başlayan dağılımlarda bulunur. İlk simetrik; ilk simetrik olasılık, ilk bitişik simetrik olasılık, ilk ayrım simetrik olasılığı, ilk bitişik-ayrım simetrik olasılık, ilk düzgün simetrik olasılık ve ilk düzgün olmayan simetrik olasılıklara denir. Tek kalan simetri; farklı dizilimli dağılımlarda simetride bulunmayan bir durumla başlayan dağılımlarda bulunurken, farklı dizilimsiz dağılımlarda dağılımın ilk durumdan farklı bir durumla başlayan dağılımlarda bulunur. Tek kalan simetri; tek kalan simetrik olasılık, tek kalan bitişik simetrik olasılık, tek kalan ayrım simetrik

GÜLDÜNYA

olasılığı, tek kalan bitişik-ayrım simetrik olasılık, tek kalan düzgün simetrik olasılık ve tek kalan düzgün olmayan simetrik olasılıklara denir. Kalan simetri; farklı dizilimli dağılımlarda simetride bulunmayan durumlarla başlayan dağılımlarda bulunurken, farklı dizilimsiz dağılımlarda dağılımın ilk durumdan farklı durumlarla başlayan dağılımlarda bulunur. Kalan simetri; kalan simetrik olasılık, kalan bitişik simetrik olasılık, kalan ayrım simetrik olasılığı, kalan bitişik-ayrım simetrik olasılık, kalan düzgün simetrik olasılık ve kalan düzgün olmayan simetrik olasılıklara denir. Dağılımların tümünde bulunan düzgün ve düzgün olmayan simetrik durumların sayılarına ise sırayla toplam düzgün ve toplam düzgün olmayan simetrik olasılık denir.

Bağımlı durum sayısı bağımlı olay sayısından büyük farklı dizilimsiz dağılımlarda simetrinin durumlarının bulunabileceği olaylara göre; toplam düzgün simetrik olasılık ve toplam düzgün olmayan simetrik olasılığının tanım ve eşitlikleri de bu kitapta verilecektir. Bu eşitlikler ise; simetriden seçilecek bir duruma, simetrinin ilk ve son durumuna, simetrinin ilk ve herhangi bir durumuna, simetrinin herhangi iki durumuna, simetrinin ilk ve herhangi iki durumuna, simetrinin ilk herhangi bir ve son durumuna, simetrinin ilk herhangi iki ve son durumuna göre verilecektir.

Farklı dizilimsiz dağılımlarda simetrinin durumlarının olasılık dağılımındaki sırası, simetrik olasılıkları etkiler. Bu nedenle farklı dizilimsiz dağılımlarda, simetrinin durumlarının bulunabileceği olaylara göre toplam düzgün ve düzgün olmayan simetrik olasılık eşitlikleri, simetrinin durumlarının olasılık dağılımındaki sıralamalarına göre de ayrı ayrı verilecektir.

Simetrinin durumlarının bağımlı olasılıklarının farklı dizilimsiz dağılımlarındaki sırasına göre verilen eşitliklerdeki toplam alma sınır değerleri, simetrinin küçükten büyüğe sıralanan dağılımlarına göre verilmiştir. Aynı eşitliklerde simetrinin durumları yer değiştirilerek, büyükten küçüğe sıralanan dağılımlar için de simetrik olasılık eşitlikleri elde edilir.

Bu kitapta bağımlı durum sayısı bağımlı olay sayısından büyük farklı dizilimsiz dağılımlarda simetrinin seçilen durumlarından iki veya üç durumuna göre düzgün olmayan simetrik olasılıklar; simetrinin ilk ve herhangi iki durumunun bulunabileceği olaylarda son iki durumuna göre, simetrinin ilk herhangi bir ve son durumunun bulunabileceği olaylarda son iki durumuna göre, simetrinin ilk herhangi iki ve son durumunun bulunabileceği olaylarda son iki durumuna göre ve simetrinin ilk herhangi iki ve son durumunun bulunabileceği olaylarda son üç durumuna göre verilmektedir.

BAĞIMLI OLASILIKLI FARKLI DİZİLİMSİZ SİMETRİNİN BAĞIMLI DURUMLARININ BULUNABİLECEĞİ OLAYLARA GÖRE TOPLAM DÜZGÜN OLMAYAN SİMETRİK OLASILIK

VDOİHİ cilt 1.6.1 de simetriden seçilecek durumlara göre farklı dizilimsiz dağılımların tamamında simetrik olasılığın düzgün olmadan bulunabileceği dağılımlar tanım ve eşitlikleri verilmiştir. Bu cilte simetriden üç durum seçildiğinde, bu durumlardan son iki durumun bitişik-ayrım bulunmasına veya simetriden dört durum seçildiğinde, bu durumlardan son iki veya son üç durumun bitişik-ayrım bulunmasına göre farklı dizilimsiz dağılımların tamamında simetrinin durumlarının, düzgün olmadan bulunabileceği olasılıklar tanımlanarak eşitlikleri verilecektir.

SİMETRİDEN SEÇİLEN ÜÇ DURUMDAN SON İKİ DURUMU BAĞLI TOPLAM DÜZGÜN OLMAYAN SİMETRİK OLASILIK

Bağımlı olasılıklı farklı dizilimsiz dağılımlarda, simetrinin herhangi iki bağımlı durumuna göre, simetrinin ilk ve herhangi iki bağımlı durumunun bulunacağı olaylara bağlı, düzgün olmayan simetrik durumların bulunduğu dağılımlar sayısı; simetrinin ilk ve herhangi iki durumunun bulunabileceği olaylara göre herhangi iki duruma bağlı bağımlı olasılıklı farklı dizilimsiz simetrik bitişik-ayrım olasılık eşitliğinden, simetrinin ilk ve herhangi iki durumunun bulunabileceği olaylara göre herhangi iki duruma bağlı bağımlı olasılıklı farklı dizilimsiz toplam düzgün simetrik olasılık eşitliğinin farkına eşittir. Bağımlı olasılıklı farklı dizilimsiz dağılımlardaki simetrinin herhangi iki bağımlı durumuna göre, simetrinin ilk ve herhangi iki bağımlı durumunun bulunacağı olaylara bağlı, bağımlı olasılıklı farklı dizilimsiz toplam düzgün olmayan simetrik olasılıklar için,

$$fz^{DOSD}_{\Rightarrow j_s,j_{ik},j^{sa}} = fz^{S}_{\Rightarrow j_s,j_{ik},j^{sa}} \Leftrightarrow - fz^{DSD}_{\Leftarrow j_s,j_{ik},j^{sa}}$$

eşitliğinin sağlanması için terimlerin $\boldsymbol{l_{ik}} - j_{sa}^{ik} + 1 > \boldsymbol{l_s} \wedge \boldsymbol{l_{sa}} + j_{sa}^{ik} - j_{sa} > \boldsymbol{l_{ik}}$ için eşitleri yazıldığında,

$$fz^{DOSD}_{\Rightarrow j_s,j_{ik},j^{sa}} = \left(\sum_{k=1}^{D+\boldsymbol{l_{ik}}+j_{sa}-\boldsymbol{n}-\boldsymbol{l_{sa}}-j_{sa}^{ik}+1} \sum_{(j_s=\boldsymbol{l_s}+\boldsymbol{n}-D)}^{(j_{ik}-j_{sa}^{ik}+1)} \sum_{j_{ik}=j^{sa}+j_{sa}^{ik}-j_{sa}}^{(\boldsymbol{l_s}+j_{sa}-k)} \sum_{(j^{sa}=\boldsymbol{l_{sa}}+\boldsymbol{n}-D)}^{} \right.$$

$$\left. \frac{(\boldsymbol{l_s}-k-1)!}{(\boldsymbol{l_s}-j_s-k+1)!\cdot(j_s-2)!} \right).$$

düzgün simetrik olasılık, 1.2.1/38, 1.2.1/166
düzgün olmayan simetrik olasılık, 1.2.1/124, 1.2.1/200
Simetrinin ilk herhangi bir ve son durumunun bulunabileceği olaylara göre bağımlı olasılıklı farklı dizilimli
simetrik olasılık, 1.2.1/23, 1.2.1/154
simetrik ayrım olasılığı, 1.2.1/68, 1.2.1/69, 1.2.1/185
simetrik bitişik olasılık, 1.2.1/50, 1.2.1/170, 1.2.1/171
düzgün simetrik olasılık, 1.2.1/50, 1.2.1/171
düzgün olmayan simetrik olasılık, 1.2.1/70, 1.2.1/186
Simetrinin ilk herhangi [illegible] son durumunun bulunabileceği olaylara göre herhangi iki duruma bağlı bağımlı olasılıklı farklı dizilimli
simetrik ayrım olasılığı, 1.2.1/71, 1.2.1/187
simetrik bitişik olasılık, 1.2.1/52, 1.2.1/[illegible]
Simetrinin ilk ve herhangi iki durumunun bulunabileceği olaylara göre bağımlı olasılıklı farklı dizilimli
simetrik [illegible]k, 1.2.1/20, 1.2.1/152
simetrik ayrım olasılığı, 1.2.1/64, 1.2.1/65, 1.2.1/182
simetrik bitişik olasılık, 1.2.1/45, 1.2.1/169
düzgün simetrik olasılık, 1.2.1/45, 1.2.1/169
düzgün olmayan simetrik olasılık, 1.2.1/66, 1.2.1/183
Simetrinin ilk ve herhangi iki durumunun bulunabileceği olaylara göre herhangi iki duruma bağlı bağımlı olasılıklı farklı dizilimli
simetrik ayrım olasılığı, 1.2.1/67, 1.2.1/184
simetrik bitişik olasılık, 1.2.1/47, 1.2.1/48, 1.2.1/170
Simetrinin ilk ve son durumunun bulunabileceği olaylara göre bağımlı olasılıklı farklı dizilimli
simetrik olasılık, 1.2.1/10, 1.2.1/146
simetrik ayrım olasılığı, 1.2.1/59, 1.2.1/177
simetrik bitişik olasılık, 1.2.1/34, 1.2.1/163
simetrik bitişik-ayrım olasılığı, 1.2.1/106, 1.2.1/107, 1.2.1/196
düzgün simetrik olasılık, 1.2.1/35, 1.2.1/163, 1.2.1/164

GÜLDÜNYA

düzgün olmayan simetrik olasılık, 1.2.1/110, 1.2.1/197
Simetrinin son durumunun bulunabileceği olaylara göre bağımlı olasılıklı farklı dizilimli simetrik olasılık, 1.2.1/3, 1.2.1/4, 1.2.1/142, 1.2.1/143
Simetrinin art arda durumlarına bağlı bağımlı olasılıklı farklı dizilimsiz
simetrik ayrım olasılığı, 1.2.3/23
simetrik bitişik olasılık, 1.2.2/23
simetrik bitişik-ayrım olasılığı, 1.2.4/39
ilk simetrik ayrım olasılığı, 1.3.3/17
ilk simetrik bitişik olasılık, 1.3.2/17

tek kalan düzgün simetrik olasılık, 1.4.6/5
tek kalan düzgün olmayan simetrik olasılık, 1.4.6/202
tek kalan simetrik olasılık, 1.4.1/3, 1.4.1/4
kalan simetrik ayrım olasılığı, 1.5.3/4
kalan simetrik bitişik olasılık, 1.5.2/3, 1.5.2/4
kalan simetrik bitişik-ayrım olasılığı, 1.5.4/4, 1.5.4/5
kalan düzgün simetrik olasılık, 1.5.6/3
kalan düzgün olmayan simetrik olasılık, 1.5.6/221
kalan simetrik olasılık, 1.5.1/3
toplam düzgün simetri olasılık, 1.6.1/5
toplam düzgün olmayan simetri olasılık, 1.6.1/220

T

Tek kalan simetrik ayrım olasılığı, 1.4.3/3

GÜLDÜNYA

VDOİHİ'de Olasılık ve İhtimal konularının tanım ve eşitlikleri verilmektedir. Ayrıca VDOİHİ'de olasılık ve ihtimalin uygulama alanlarına da yer verilmektedir. VDOİHİ konu anlatım ciltleri ve aynı cilt numaraları ile soru, problem ve ispat çözümlerinden oluşmaktadır. Bu cilt bağımlı olasılıklı farklı dizilimsiz olasılık dağılımlarında, simetrinin belirli durumlarının bulunabileceği olaylarda simetrinin iki ve üç durumuna göre düzgün olmayan simetrik olasılığın, tanım ve eşitliklerinden oluşmaktadır.

VDOİHİ Bağımlı Olasılıklı Farklı Dizilimsiz Dağılımlarda Simetrinin [illegible]larının Bulunabileceği Olaylarda Sınırlı Durumlara Göre Düzgün Olmayan Simetrik Olasılık kitabında, bağımlı durum sayısı bağımlı olay sayısından büyük farklı dizilimsiz dağılımlarda simetrinin ilk ve herhangi iki durumunun bulunabileceği olaylarda son iki durumuna göre, simetrinin ilk herhangi bir ve son durumunun bulunabileceği olaylarda son iki durumuna göre, simetrinin ilk herhangi iki ve son durumunun bulunabileceği olaylarda iki durumuna göre ve simetrinin ilk herhangi iki ve son durumunun bulunabileceği olaylarda son üç durumuna göre düzgün olmayan simetrik olasılığının, tanım ve eşitlikleri verilmektedir.

VDOİHİ'nin diğer ciltlerinde olduğu gibi bu ciltte de verilen tanım eşitlikler, olasılık tablolarından elde edilen verilerle üretilmiştir. Diğer eşitlikler ise eşitliklerden teorik yöntemle üretilmiştir. Eşitlik ve tanımların üretilmesinde dış kaynak kullanılmamıştır.
